OBJECT-ORIENTED LANGUAGE AND THEORY

## 1-2. VERSION CONTROL

---

Nguyen Thi Thu Trang  
trangntt@soict.hust.edu.vn

1

2

## Outline

1. **Introduction**
2. Models
3. Vocabulary
4. Tools

2

3

## Why version control? (1/2)

- Scenario 1:
  - Your program is working
  - You change “just one thing”
  - Your program breaks
  - You change it back
  - Your program is still broken--*why*?
- Has this ever happened to you?

3

4

## Why version control? (2/2)

- Your program worked well enough yesterday
- You made a lot of improvements last night...
  - ...but you haven't gotten them to work yet
- You need to turn in your program *now*
- Has this ever happened to you?

4

5

## Version control for teams (1/2)

- Scenario:
  - You change one part of a program--it works
  - Your co-worker changes another part--it works
  - You put them together--it doesn't work
  - Some change in one part must have broken something in the other part
  - What were all the changes?

5

6

## Version control for teams (2/2)

- Scenario:
  - You make a number of improvements to a class
  - Your co-worker makes a number of different improvements to the same class
- How can you merge these changes?

6

7

## Tools: diff

- There are a number of tools that help you spot changes (differences) between two files
- Tools include `diff`, `rcsdiff`, `jDiff`, etc.
- Of course, they won't help unless you kept a copy of the older version
- Differencing tools are useful for finding a *small* number of differences in a *few* files

7

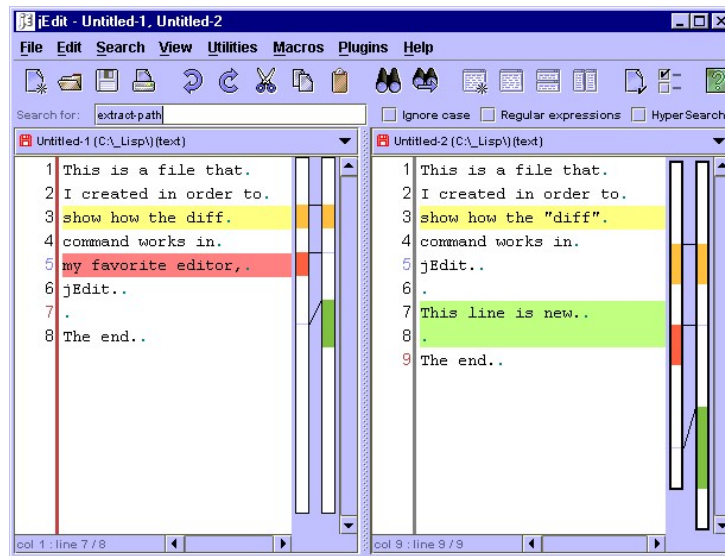

8

## Tools: jDiff

- `jDiff` is a plugin for the `jEdit` editor
- Advantages:
  - Everything is color coded
  - Uses synchronized scrolling
  - It's inside an editor--you can make changes directly
- Disadvantages:
  - Not stand-alone, but must be used within `jDiff`
  - Just a diff tool, not a complete solution

8

## Tools: jDiff

9

## Version control systems

- A version control system (often called a source code control system) does these things:
  - Keeps multiple (older and newer) versions of everything (not just source code)
  - Requests comments regarding every change
  - Allows “check in” and “check out” of files so you know which files someone else is working on
  - Displays differences between versions

10

11

## Outline

1. Introduction
- 2. Versioning Models**
3. Vocabulary
4. Tools

11

12

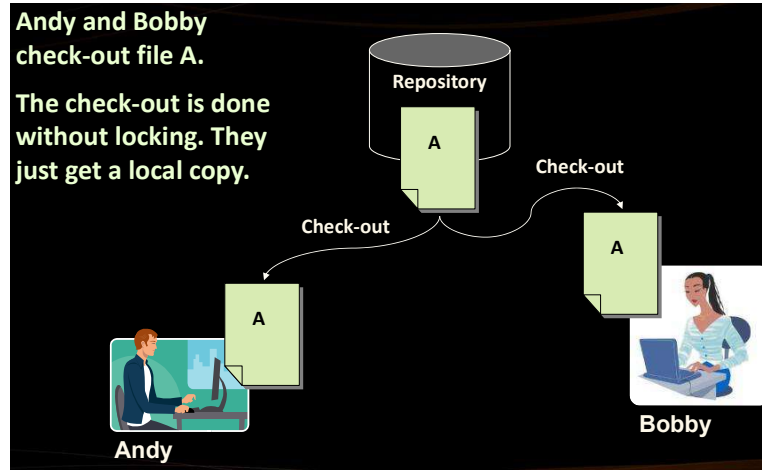

## 2. Versioning Models

- Lock-Modify-Unlock
- Copy-Modify-Merge
- Distributed Version Control

12

13

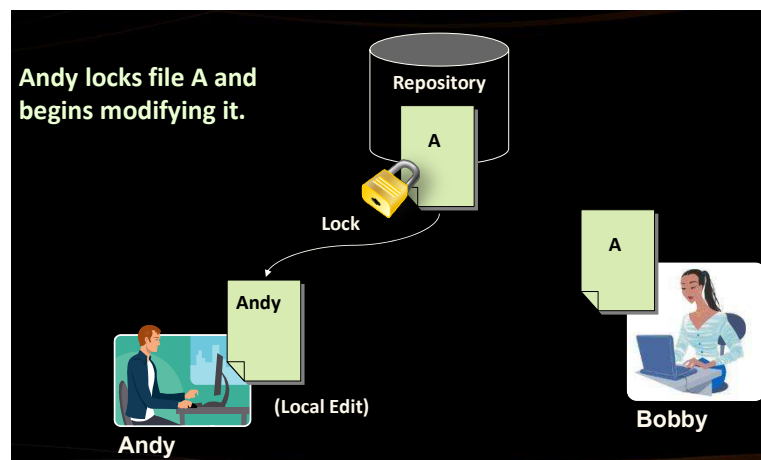

## 2.1. The Lock-Modify-Unlock Model

13

14

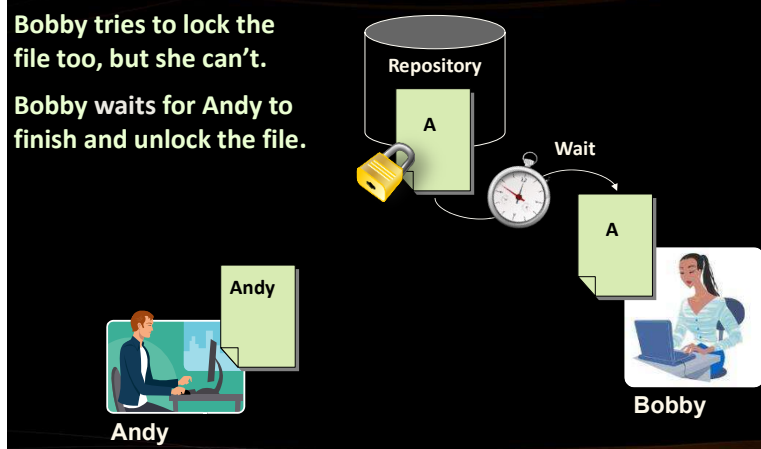

## 2.1. The Lock-Modify-Unlock Model (2)

14

15

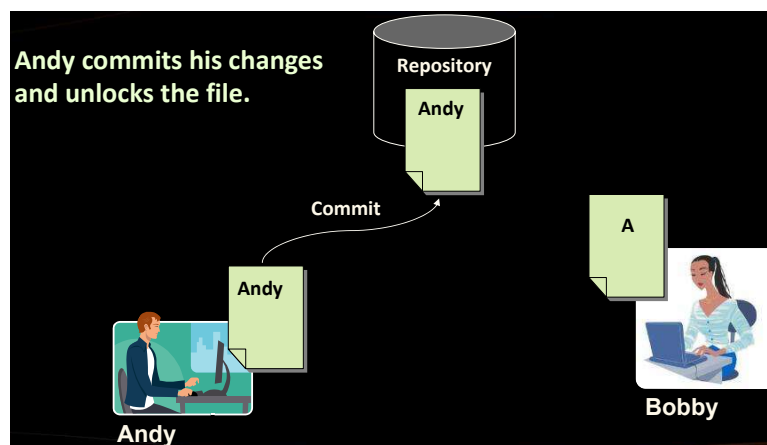

## 2.1. The Lock-Modify-Unlock Model (3)

15

16

## 2.1. The Lock-Modify-Unlock Model (4)

16

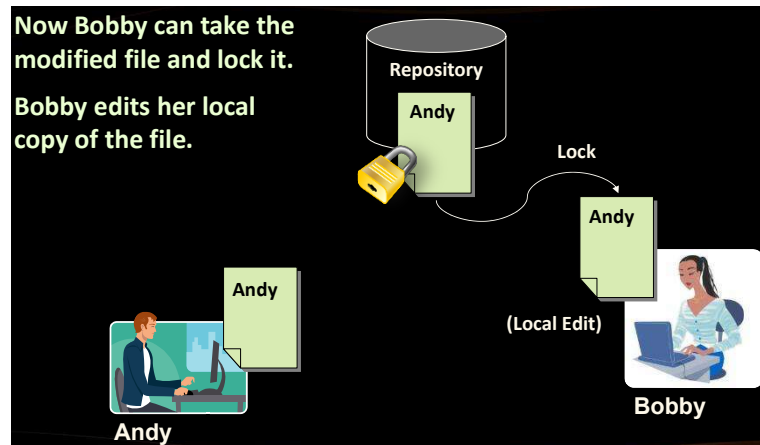

17

## 2.1. The Lock-Modify-Unlock Model (5)

Now Bobby can take the modified file and lock it.

Bobby edits her local copy of the file.

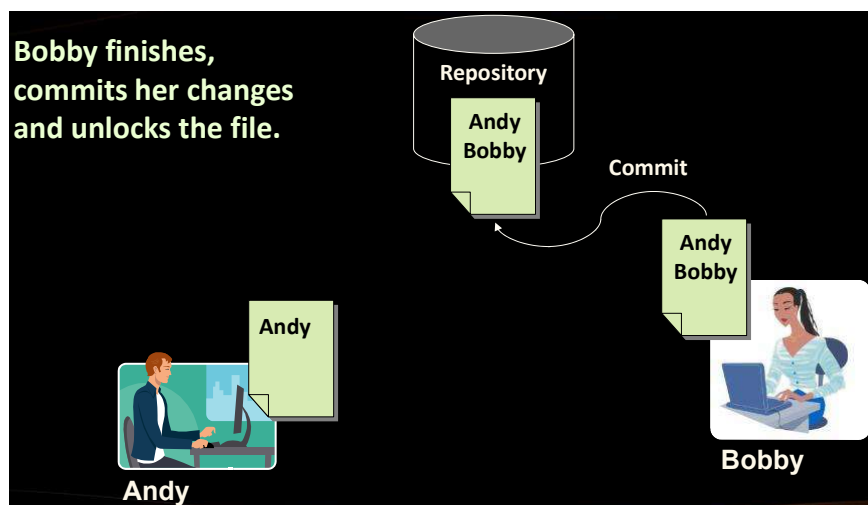

17

18

## 2.1. The Lock-Modify-Unlock Model (6)

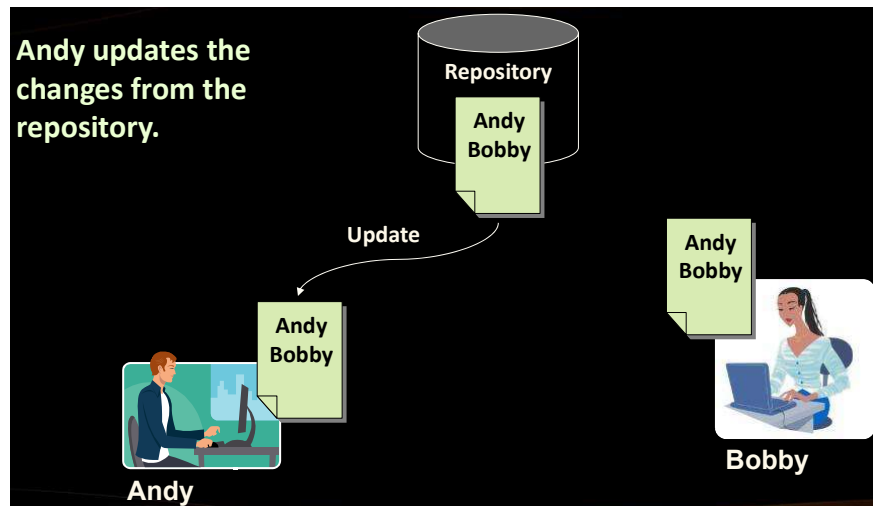

Bobby finishes, commits her changes and unlocks the file.

18

19

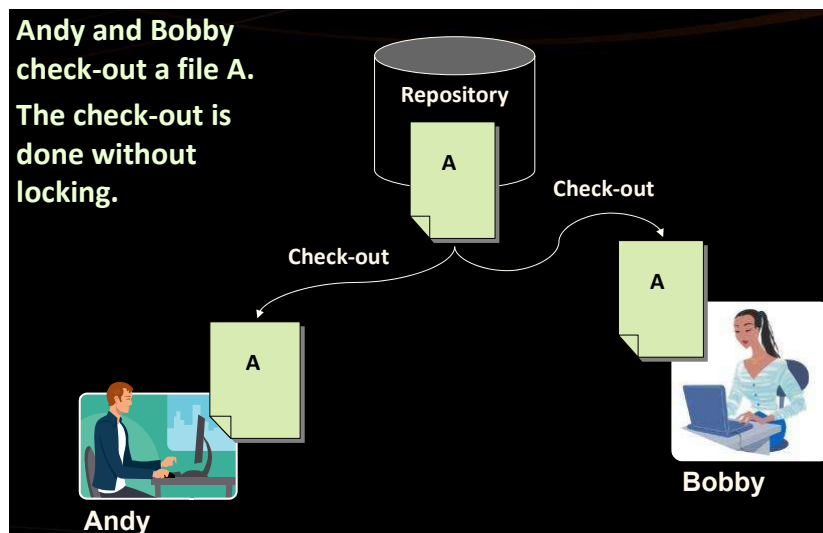

## 2.1. The Lock-Modify-Unlock Model (7)

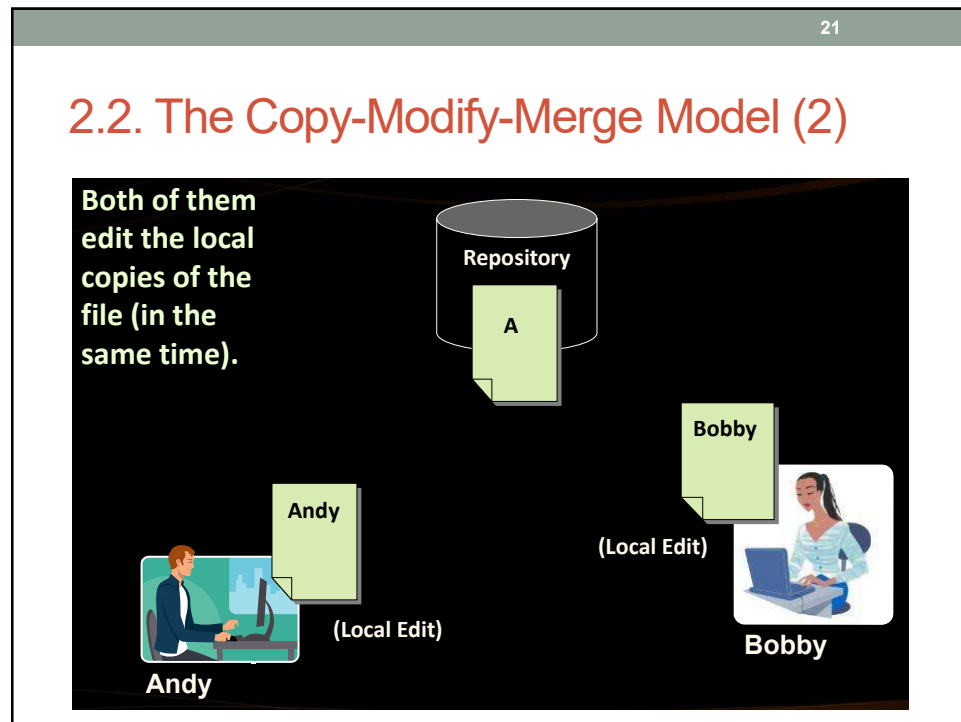

19

20

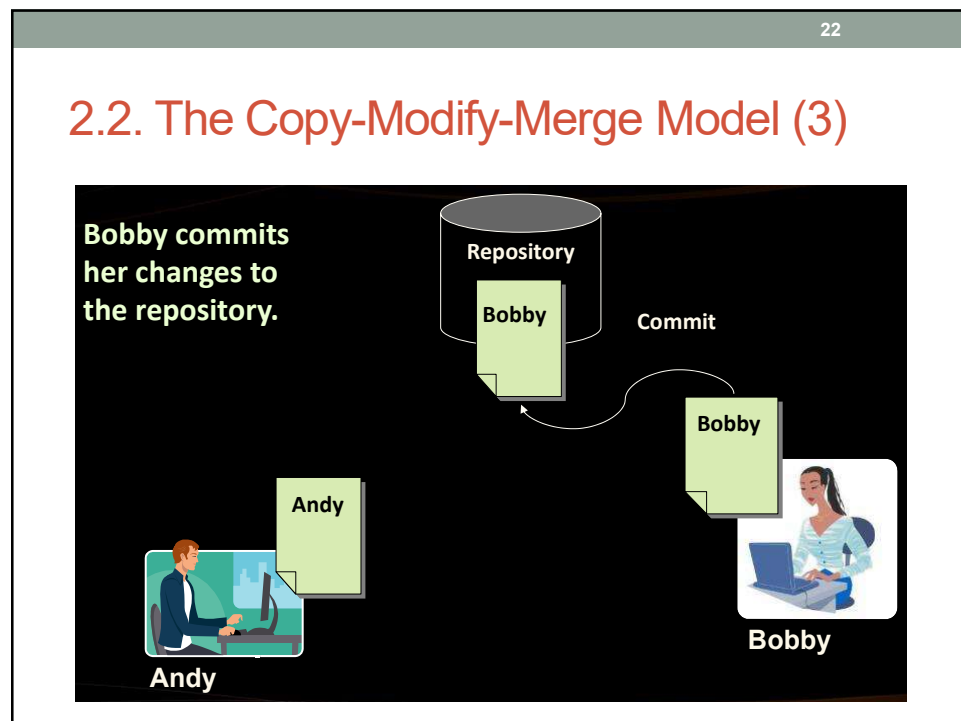

## 2.2. The Copy-Modify-Merge Model

20

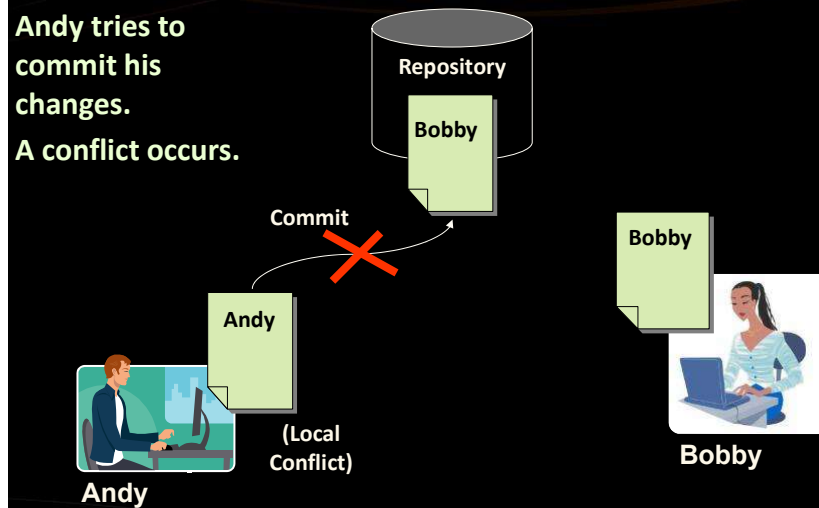

21

22

23

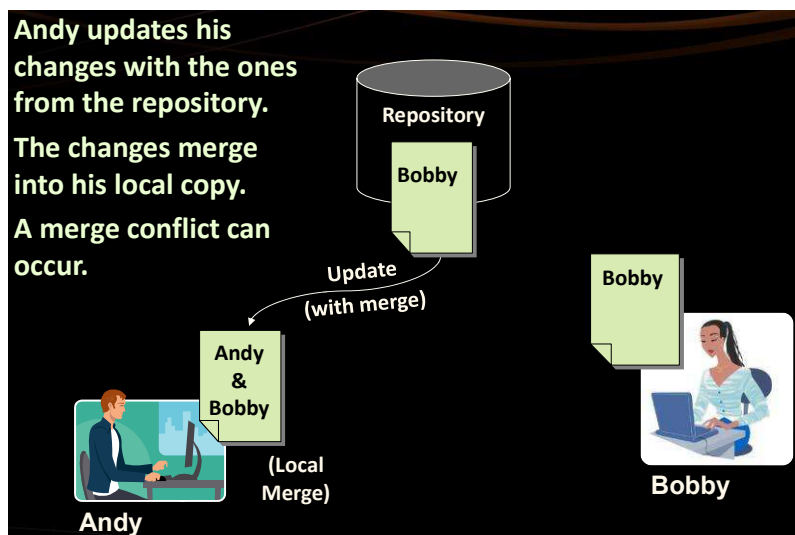

## 2.2. The Copy-Modify-Merge Model (4)

23

24

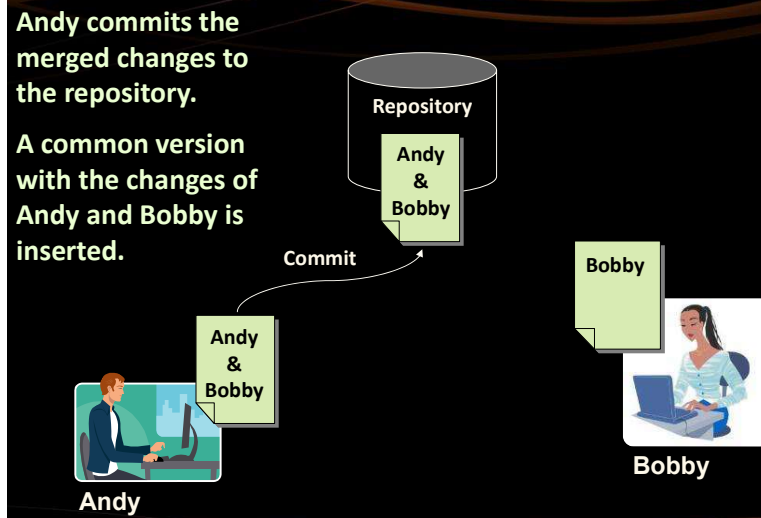

## 2.2. The Copy-Modify-Merge Model (5)

24

25

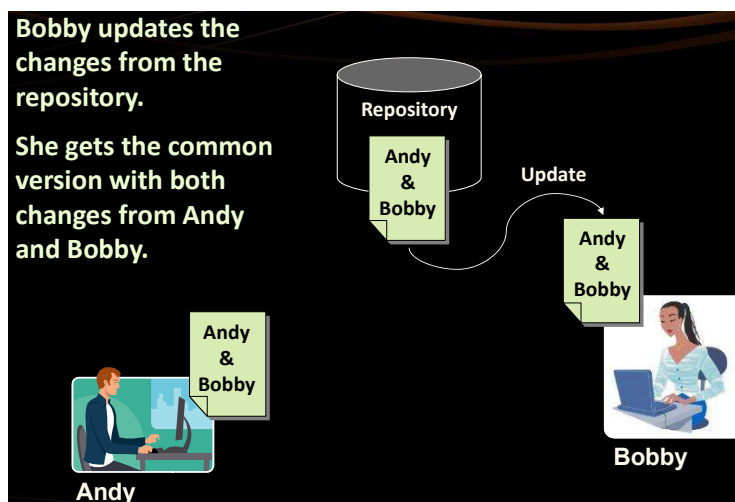

## 2.2. The Copy-Modify-Merge Model (6)

25

26

## 2.2. The Copy-Modify-Merge Model (7)

26

27

## 2.3. Distributed version control

- Compared to Central version control
  - Only one repository

### Centralized version control

27

28

## Distributed Version Control

### Distributed version control

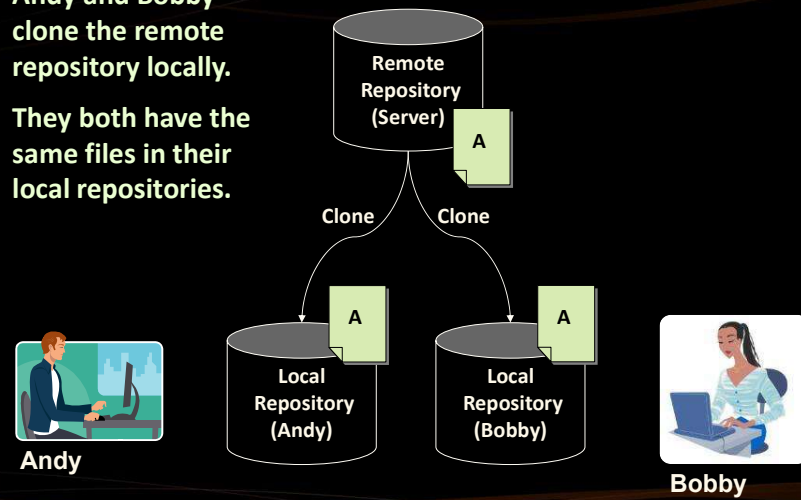

28

29

## Distributed Version Control (1)

Andy and Bobby  
clone the remote  
repository locally.  
They both have the  
same files in their  
local repositories.

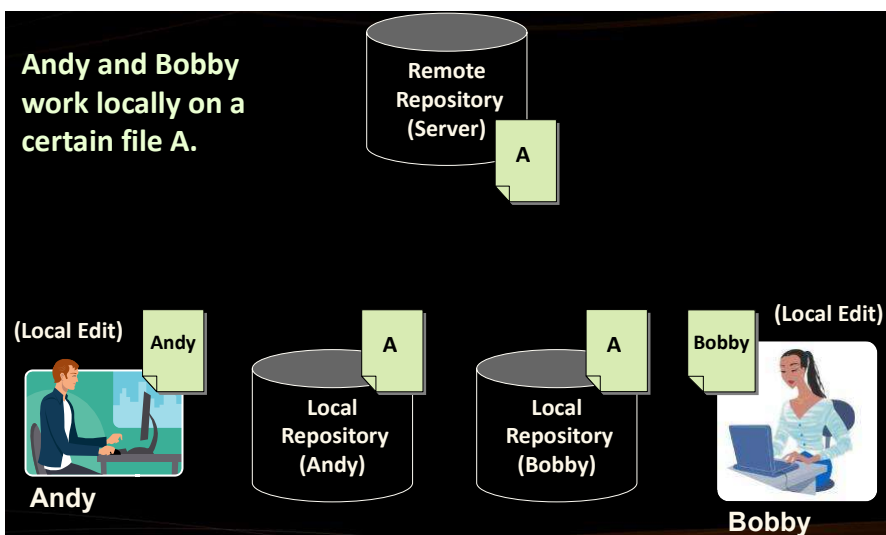

29

30

## Distributed Version Control (2)

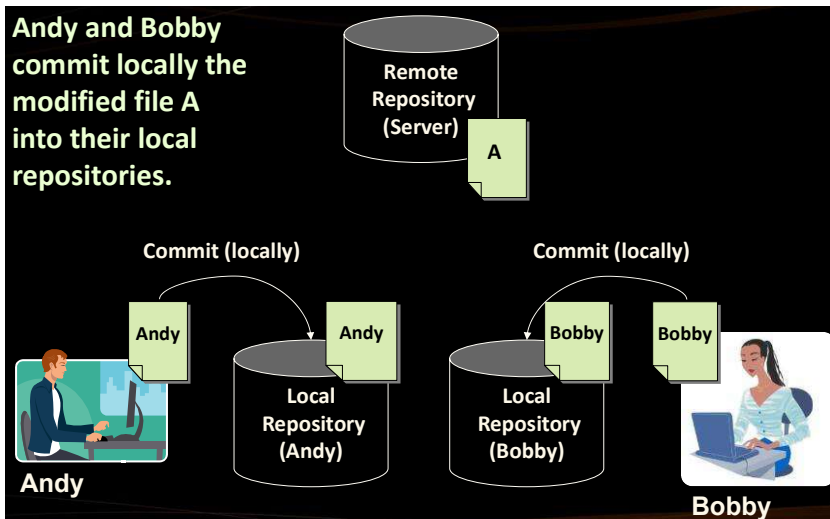

Andy and Bobby  
work locally on a  
certain file A.

30

31

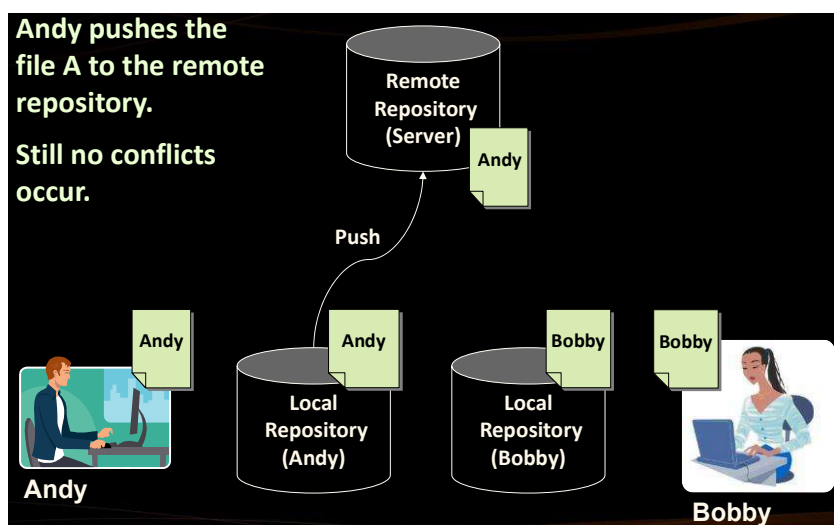

## Distributed Version Control (3)

31

32

## Distributed Version Control (4)

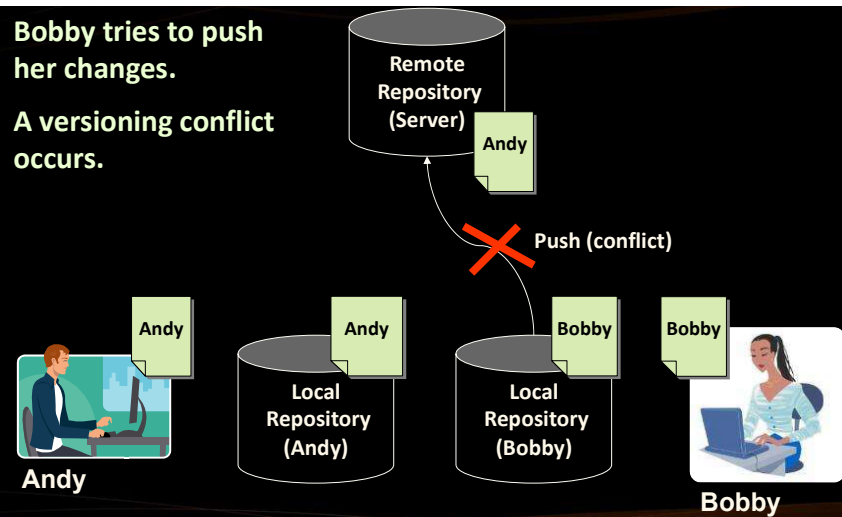

32

33

## Distributed Version Control (5)

**Bobby tries to push her changes.  
A versioning conflict occurs.**

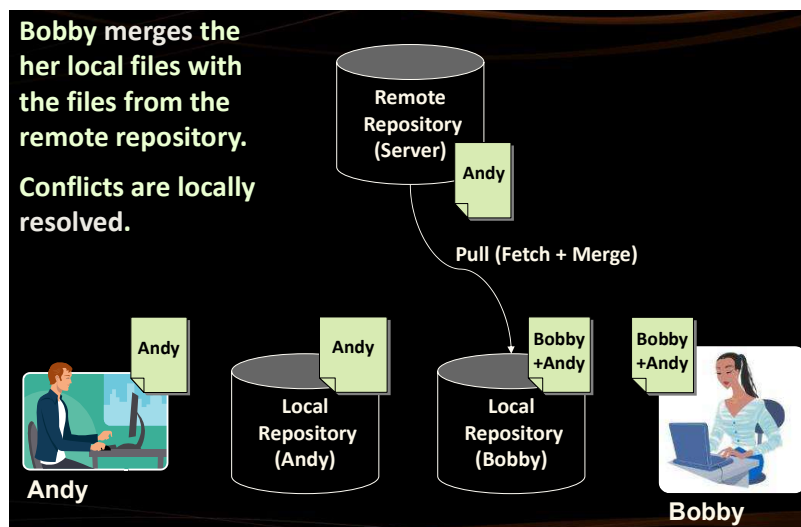

33

34

## Distributed Version Control (6)

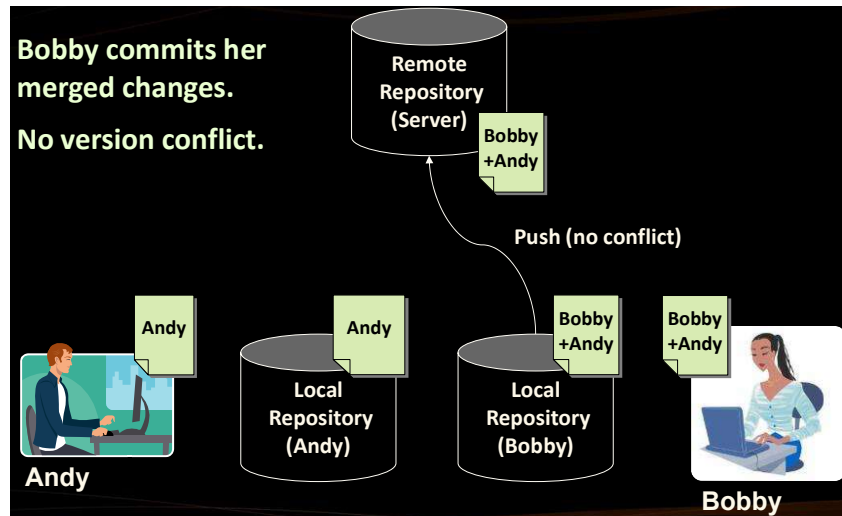

**Bobby merges the  
her local files with  
the files from the  
remote repository.  
Conflicts are locally  
resolved.**

34

35

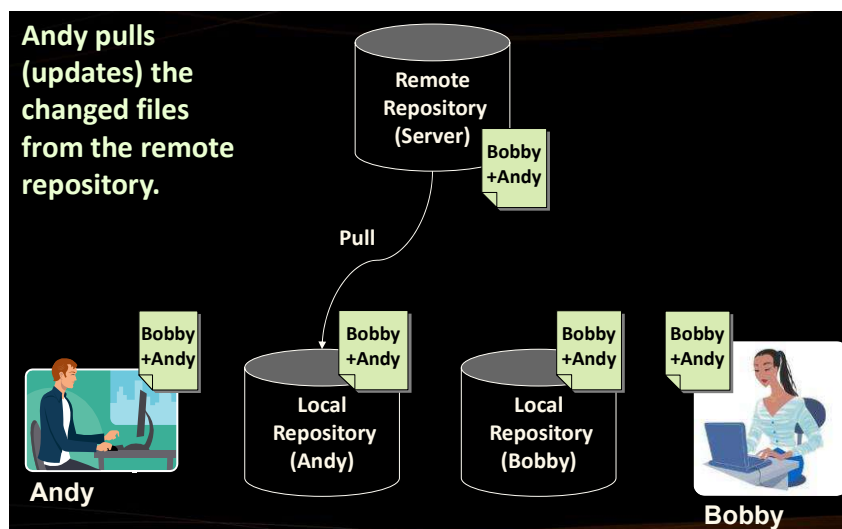

## Distributed Version Control (7)

35

36

## Distributed Version Control (8)

36

37

## Outline

1. Introduction
2. Versioning Models
3. **Vocabulary**
4. Tools

37

38

## 3. Vocabulary

- Repository (source control repository)
  - A server that stores the files (documents)
  - Keeps a change log
- Revision, Version
  - Individual version (state) of a document that is a result of multiple changes
- Check-Out, Clone
  - Retrieves a working copy of the files from a remote repository into a local directory
  - It is possible to lock the files

38

39

## Vocabulary

- Change
  - A modification to a local file (document) that is under version control
- Change Set / Change List
  - A set of changes to multiple files that are going to be committed at the same time
- Commit, Check-In
  - Submits the changes made from the local working copy to the repository
  - Automatically creates a new version
  - Conflicts may occur!

39

40

## Vocabulary

- Conflict
  - The simultaneous change to a certain file by multiple users
  - Can be solved automatically and manually
- Update, Get Latest Version, Fetch / Pull
  - Download the latest version of the files from the repository to a local working directory + merge conflicting files
- Undo Check-Out, Revert / Undo Changes
  - Cancels the local changes
  - Restores their state from the repository

40

41

## Vocabulary

- Merge
  - Combines the changes to a file changed locally and simultaneously in the repository
  - Can be automated in most cases
- Label / Tag
  - Labels mark with a name a group of files in a given version
  - For example a release
- Branch / Branching
  - Division of the repositories in a number of separate workflows

41

43

## Outline

1. Introduction
2. Versioning Models
3. Vocabulary
4. **Tools**

43

44

## Tools

- Central version control
  - SVN (Subversion)
  - TFS
  - Source safe (commercial)
- Distributed version control
  - Git
  - Mercurial

44

45

## What is Git?

- Git
  - Distributed source-control system
  - Work with local and remote repositories
  - Git bash – command line interface for Git
  - Free, open-source
  - Has Windows version (msysGit)
    - <http://msysgit.github.io>
    - <https://www.atlassian.com/git/tutorials/setting-up-a-repository>

45

46

## Installing Git

- msysGit Installation on Windows
  - Download Git for Windows from: <http://msysgit.github.io>
  - “Next, Next, Next” does the trick
  - Options to select (they should be selected by default)
    - “Use Git Bash only”
    - “Checkout Windows-style, commit Unix-style endings”
- Git installation on Linux:  
`sudo apt-get install git`

46

47

## Basic Git Commands

- Cloning an existing Git repository  
`git clone [remote url]`
- Fetch and merge the latest changes from the remote repository  
`git pull`
- Preparing (adding / selecting) files for a commit  
`git add [filename]` ("git add ." adds everything)
- Committing to the local repository  
`git commit -m "[your message here]"`

47

48

## Basic Git Commands

- Check the status of your local repository (see the local changes)  
`git status`
- Creating a new local repository (in the current directory)  
`git init`
- Creating a remote (assign a short name for remote Git URL)  
`git remote add [remote name] [remote url]`
- Pushing to a remote (send changes to the remote repository)  
`git push [remote name] [local name]`

48

49

## Using Git: Example

```
mkdir work
cd work
git clone https://github.com/SoftUni/test.git dir
cd test
dir
git status
(edit some file)
git status
git add .
git commit -m "changes"
git push
```

49

50

## Project Hosting Sites

- GitHub – <https://github.com>
  - The #1 project hosting site in the world
  - Free for open-source projects
  - Paid plans for private projects
- GitHub provides own Windows client
  - GitHub for Windows
  - <http://windows.github.com>
  - Dramatically simplifies Git
  - For beginners only

50

51

## Project Hosting Sites

- Google Code – <http://code.google.com/projecthosting/>
  - Source control (SVN), file release, wiki, tracker
  - Very simple, basic functions only, not feature-rich
  - Free, all projects are public and open source
  - 1-minute signup, without heavy approval process
- SourceForge – <http://www.sourceforge.net>
  - Source control (SVN, Git, ...), web hosting, tracker, wiki, blog, mailing lists, file release, statistics, etc.
  - Free, all projects are public and open source

51

## Project Hosting Sites

- CodePlex – <http://www.codeplex.com>
  - Microsoft's open source projects site
  - Team Foundation Server (TFS) infrastructure
  - Source control (TFS), issue tracker, downloads, discussions, wiki, etc.
  - Free, all projects are public and open source
- Bitbucket – <http://bitbucket.org>
  - Source control (Mercurial), issue tracker, wiki, management tools
  - Private projects, free and paid editions
